GOOD CHANGE. Coffee to Postum.

The large army of persons who have found relief from many chronic ailments by changing from coffee to Postum as a daily beverage, is growing each day.

It is only a simple question of trying it for oneself in order to know the joy of returning health as realized by an Ills. young lady. She writes:

"I had been a coffee drinker nearly all my life and it affected my stomach -caused insomnia and I was seldom without a headache. I had heard about Postum and how beneficial it was, so concluded to quit coffee and

try it. "I was delighted with the change. I can now sleep well and seldom ever have headache. My stomach has gotten strong and I can eat without suffering afterwards. I think my whole system greatly benefited by Postum.

"My brother also suffered from stomach trouble while he drank cof- not get navel infection from filth. fee, but now, since using Postum, he feels so much better he would not go

back to coffee for anything." Name given by Postum Co., Battle

Creek, Mich. Read "The Road to Wellville," in pkgs. Postum comes in two forms:

Regular Postum—must be boiled-15c and 25c packages. instant Postum-is a soluble pow-

der. A teaspoonful dissolves quickly in a cup of hot water and, with cream and sugar, makes a delicious beverage instantly—30c and 50c tins. The cost per cup of both kinds is out the same.

"There's a Reason" for Postum. -sold by Grocers.

CLOVER CROPS IMPORTANT THE RAISING OF CALVES

GOOD PLAN IS TO CEASE CULTI- DEVELOPMENT OF A HIGH-CLASS VATION IN JUNE AND SOW COWPEAS.

By W. L. Howard, Professor of Horticulture, College of Agriculture, University of Missouri.

Orchard cover crops in Missouri, in the main, serve four general purposes: First, to save soil moisture; second, to prevent burning out of the humus; third, to add fertility, and, fourth, to prevent washing of the ground in fall and winter.

In the Ozark region of Missouri cover crops are usually sown in June or July, as it has been found that clean cultivation throughout the season soon lowers the fertility of the land. This is because the hot sun burns up the humus or decayed vegetable matter that is in the soil. These same soils are usually greatly benefited by sowing cowpeas or hairy vetch, because these are leguminous crops and consequently add fertility to the land. If cowpeas are used they should be sown in June or early July if it is desired to have the plants ma-

ure and the seeds ripen before frost. The vetch may be sown in July or August or even September. If the land is likely to wash, the entire crop of peas may be left to rot upon the ground. If the land is level the peas may be cut and used for hay. Those BOX H, NOTRE DAME, INDIANA who have tried vetch like it very much, especially for rolling land. On account of its creeping habit, the plants soon cover all the ground and

The Chinch Bug.

The farmers of Missouri should not lose sight of the fact that this is ideal chinch bug weather, and where old bugs were abundant in wheat fields -has ever reached the White House, during May there is danger that their young will move into other crops when the wheat is ripe and cut. It is too late to fight the chinch bug after it has left the wheat fields and gone to other crops. Every farmer should "No, that does not aggravate me; it examine his wheat, and if the young, is the giving of it to you."-Pages red and black bugs are abundant he should plan to fight the pest when it starts to migrate.

Kafir Corn for Silage.

This crop stands next to corn in quality of silage produced. It is in use successfully in those sections where small rainfall makes it a safer below that of corn. Care should be taken that the kafir is quite well masilage is concerned.

Care of the Calves at Calving. The cow should be in good flesh at calving time for best results in milk and fat production. She should be dry ix weeks. During the pasturing season there is no better plan than to leave her in the pasture, of course under observation, until the calf is born. If the cow is kept at the barn at calving time she should have a roomy, clean stall where the calf will

Causes of Rheumatism. Muscular rheumatism of the shoulder and upper arm may be produced by sitting in a draughty train or near an open window, or by a wetting much n the same way as chronic rheumaism is provoked by cold and damp. And, again, cold and damp, combined with errors of diet, are the main causes of rheumatoid arthritis, or

"Was it a quiet wedding?" "Decidedly! Both the bride and the groom were so scared they could hardly speak above a whisper."

rheumatic gout.

HERD DEPENDS ON MANY FACTORS.

By C. H. Eckles, Professor of Dairy Husbandry, College of Agricul-ture, University of Missouri.

With high-priced land and expensive feeds the ordinary calf that is valuable only for beef cannot be raised with any profit by allowing it to nurse the cow. A calf raised in this way consumes about two gallons of milk a day for six months, or a total of 2,800 pounds. If it be average milk, with 4 per cent fat, it contains 112 pounds of butterfat.

The economy of raising the calf with skim milk is apparent. It has been found by trial that two pounds of grain replaces one pound of butterfat as food for the calf. Calves raised on skim milk gain an average of about 11/2 pounds a day up to six months of age.

A calf raised on skim milk is equally as good as one nursed by its mother. The skim milk calf, raised properly, differs little, if any, in size, quality, thrift and value from the same animal when raised by the cow. The poor results which have so often followed the feeding of skim milk have been due to faulty methods of feeding. and not because the cream which has been taken out is of so much importance to the calf.

Taking the Calf From Its Mother.

ing is called colostrum. It is imporat first, since the calf seems to need it to start the organs of digestion head Electric Light company. properly. After a few days mixed milk may be given. In case the milk is very rich in fat, it will be best, even with the young calf, to dilute it with skim milk, as rich milk is liable to cause indigestion.

The earlier the calf is taken away from the cow the easier it will be taught to drink milk from the bucket. If the cow's udder is in good condition it is more satisfactory to take the calf away early, but when the udder is caked it is best to leave the favor of the company. calf with the mother for a few days For the first two weeks five or six quarts of milk, or about 10 or 12 pounds, a day is all the largest calf hould be allowed to take. A small calf does not need over eight or 10 pounds a day. As the calf grows older more milk may be used, but at no time does it need more than 16 or 18 winter. Summer cover crops, by shad- pounds. At the end of two weeks the strong and vigorous calf can be changed to feed on skim milk. This should be done gradually. About a week should be taken to make the complete change.

Calves which are to be raised on skim milk should be taught to eat grain early. The grain should be placed in a box where the calves can easily get to it, and they can be encouraged at first by placing a little in their mouths after they have consumed their milk. Grain can best be fed dry after the milk is fed. Calves will begin to nibble hay almost as soon as they will eat grain. For young calves timothy or mixed hay is well adapted. Clover and alfalfa are laxa-

It is a mistake to believe that a calf crop on the ground in the late sum- ceiving milk. An abundance of clean mer, but it is more necessary than in water should be given at all times and the south to have a crop that will at salt after the animal is old enough to

The calf quarters should be located in the choicest part of the barn where pens must be kept dry and clean. The most common trouble in calf raising is scours, or indigestion. This is brought about by overfeeding, feeding sour or old milk, cold milk, and from dirty pails, troughs or stalls. Success depends largely upon the ability of the feeder to prevent scours.

It is much easier to prevent scours than it is to cure them. In most cases all that is necessary is to observe the rules for feeding calves. By watching the small points and keeping the conditions right, success will take the place of failure. The essential points to be kept in mind are the following:

Do not overfeed. Feed warm milk. Feed sweet, fresh milk. Feed each animal individually.

Feed regularly. Keep the pails and quarters where the calves are kept clean.

Wanted to Know His Fate.

Of the criminal court, London, the acoustic properties are not so perfect as they might be, and there is a decided echo from the walls. Some time crop than corn. The feeding value of ago Judge Rentoul sentenced a prissilage from this crop is only slightly oner to six months' hard labor. When the judgment was passed "Six months' hard labor" was echoed from the back tured before cutting it for silage. This of the court. The prisoner turned to crop can be recommended as one that the warden by his side and inquired is successful as far as the quality of anxiously: "Are these sentences to run concurrently?"

RASH SPREAD RAPIDLY

Granton, Wis .- "My sister had a very bad, deep, wet, running sore on the side of her face and it ran up to her ear. It commenced with a small blotch of pimples which turned into perfectly natural, and a capsule of a kind of rash and spread rapidly. It itched and looked red and sore for some time and slightly swelled. A thin fluid dripped and ran from the sores which looked like water. Then the swelling would go down and it would keep on spreading. It bothered her during sleep and she would be restless. It was a kind of eczema.

"She treated for some time and it did not help her. It kept spreading larger and deeper. Having always used Cuticura Soap we told her to try it so she got some Cutleura Soap and Ointment and used them. It was two months when it was gone." (Signed) Miss Emma Retzloff, Apr. 7, 1914.

STOLE TO GET NEW START

Bank Cashier Experiences Overpowering Impulse to Get Some Place and Start Life Anew.

A bank teller in a middle western state grew weary of the narrow, circumscribed life in the town where he lived; he wanted wider interests, a new start in a new place, but a start with capital so he could push himself ahead. He took \$35,000 of the bank's funds, jumped into his automobile and started for Mexico (this was before the present revolution across the Rio Grande had reached such serious proportions) across Kansas, Oklahoma and Texas. He expected to make a clean getaway by using a motor car instead of taking a train, forgetting that an auto can be traced. The surety company at once put an inspector on his trail, and the man was captured in Texas when he was almost at Laredo, ready to cross the border.

Of the sum he stole, \$25,000 was rewhich he had taken it from the bank. The automobile was recovered and sold, and the proceeds used to make up for part of the money he had spent. This cashier is now serving a long sentence in prison merely because he experienced an overpowering impulse go some place and start life nnew
